Spiral brushes external and internal standard construction

We have prepared a catalog of standard spiral brush designs for you. We manufacture these constructions as a serial production, and we fit them with a filling material of your choice.

When choosing a brush from our standard production, you get the following benefits:

- 1. Faster delivery date** (approx. 10 business days from the order confirmation)
- 2. Better prices**

We believe that if you choose from our catalog you will get a better service in the production and delivery of our products.

Spiral brushes – external

These brushes are made from galvanized profile strip 5, and the compressed length of this brush is one meter. These brushes can also be attached to supplied shafts. As a standard design, the following designs are recommended for these shaft diameters:

Standard dimensions in mm:

| | | | | |
|--------------------|----|----|----|-----|
| d - shaft diameter | 20 | 50 | 90 | 120 |
|--------------------|----|----|----|-----|

Spiral brushes internal

These brushes are made from galvanized profile strip 5, and the compressed length of this brush is one meter. We have tools for the construction of internal brushes of these dimensions:

Standard dimensions in mm:

| | | | | |
|-----------------------------|----|----|----|-----|
| D - brush external diameter | 50 | 60 | 95 | 105 |
|-----------------------------|----|----|----|-----|
